

2012 - 2014

UPPER THOMPSON SANITATION DISTRICT

WASTEWATER RATE SCHEDULE FOR METERED AND NON-METERED CUSTOMERS

Non-Metered Customers

Single Family Equivalent (SFE) - Represents the average hydraulic and chemical characteristics of the discharge of a single-family home in the District's service area. The details of these characteristics may be changed from time to time as additional data is obtained to define the "Single Family Equivalent."

1. One SFE = 24 Fixture Unit Values (FUV)
2. Average Occupancy per SFE = 2.2 persons
3. Average Daily Wastewater Flow per Person = 70 gallons per day
4. Average Daily Wastewater Flow per SFE = 200 gallons per day
5. Peak Month Wastewater Flow per SFE = 154 gallons per day

Fixture Unit Value (FUV) - Represents the total wastewater load of a plumbing fixture on the wastewater collection and treatment system. Fixture unit values vary depending upon the type of fixture.

Each customer's rates will differ based on the number of FUV's/SFE's utilized. The minimum non-metered service charge is based on 24 fixture unit values and/or 1 SFE.

FUV's	SFE's	2011 Rates	2012 Rates These rates reflect an 8.5% annual increase	2013 Rates These rates reflect an 8.5% annual increase	2014 Rates These rates reflect an 8.5% annual increase
24	1.00	\$324.00	\$351.54	\$381.42	\$413.84
